

Hands-on Lab: Getting Hands-on with a Simple Generative AI Model

Estimated duration: 30 minutes

Introduction

ChatGPT can generate text based on prompts provided by users, engaging in conversations, answering questions, or generating creative content. This is a powerful tool for the product manager.

Objectives

In this lab, you will use ChatGPT 3.5 to identify and prioritize product features.

Prerequisites: Accessing ChatGPT (v3.5)

Access the ChatGPT website. Here are directions directly from the ChatGPT tool.

To find and use ChatGPT, you can follow these steps:

1. **Visit the OpenAI Website:** Navigate to <https://openai.com/chatgpt> using your web browser.
2. **Access ChatGPT:** Look for the ChatGPT feature on the OpenAI website. It may be prominently displayed on the homepage or accessible through a specific section or page.
3. **Engage with ChatGPT:** Once you've accessed ChatGPT, you'll typically see a text input box where you can type your messages or prompts. Simply start typing, and ChatGPT will respond based on the input you provide.
4. **Interact and Explore:** Engage in conversation with ChatGPT by asking questions, providing prompts, or sharing ideas. ChatGPT will respond in a conversational manner, generating text based on its training and understanding of natural language.

5. **Experiment and Discover:** Explore the capabilities of ChatGPT by trying out different types of prompts and questions. You can ask for information, seek advice, brainstorm ideas, or simply engage in casual conversation.
6. **Feedback and Improvement:** If you encounter any issues or have suggestions for improvement, you can provide feedback to OpenAI through their website or platform.
7. **Privacy and Safety:** Remember to use ChatGPT responsibly and avoid sharing sensitive or personal information. OpenAI prioritizes user privacy and safety, but exercising caution is always recommended when interacting with AI systems online.

Scenario

You are designing an AI-powered professional photo generator that customers can use for a variety of purposes. The AI-powered professional photo generator will be in the form of an app that customers can download and use for a moderate cost.

As part of the initial phase, you need to develop a product requirements document (PRD). You want to know what features should be considered to ensure this product is viable and meets the needs of your targeted market segment. You then want to prioritize these features in order of importance.

Tasks

Document download instructions

To download the document, keep the CTRL key pressed and click the document link.

Use the COMMAND key instead of CTRL on Mac systems.

Task 1

- Access ChatGPT.

Note: If you haven't already performed the steps, follow the directions defined in the **Prerequisites** section.

Task 2

- Develop your initial prompt to get a list of product features.

- **Remember:** Keep your prompt simple, avoid ambiguity, and ensure you provide the required background information.
- For details, review the reading "**The Power of Prompts.**"

Here is an **example prompt** that we have used and the response provided by ChatGPT.

Note: Your response will likely differ. That is normal. Remember that generative AI will provide various responses to similar prompts from different users.

► **Example prompt**

► **ChatGPT's response**

Task 3

- Download the [ChatGPT Worksheet](#) to document what you believe are the top 5 features in priority order.

Task 4

- Generative AI systems like ChatGPT allow you to build on the conversation. After you get your list of features, think about and develop a second prompt to help you prioritize these features.

Here is an **example prompt** that we have used and the response provided by ChatGPT.

► **Example prompt**

► **ChatGPT's response**

Task 5

- Compare your findings with a peer, friend, or associate. Ask their opinion on the validity of the output.
