

Hands-on Lab: Generative AI for Generating a Work Breakdown Structure (WBS)

Estimated duration: 30 minutes

Introduction

A project manager's primary role is to define the scope to support a Project Charter. The Project Management Institute (PMI) emphasizes the Work Breakdown Structure (WBS) as a critical foundation for successful project management.

Objectives

- Review a brief scenario introducing Green Hound Toys Inc.
- Summarize the product concept document entries.
- Apply Google Gemini by creating effective prompts to develop a product concept document.

Prerequisites

- Access to Microsoft Word or equivalent.

Instructions for accessing the web page links in a new tab

To access the web pages in a new tab, keep the CTRL key pressed and click the web page link.

Use the COMMAND key instead of CTRL on Mac systems.

- Navigate to <https://gemini.google.com/> using your web browser to access Google Gemini.

- Gemini has a basic service which is available at no cost. You will be required to accept the terms of use before you can access the Gemini tool.

The Scenario

Green Hound Toys Inc. understands pet owners' increasing desire for eco-friendly and durable toys. They plan to create an innovative line of eco-friendly dog toys and are developing the initial Project Management Plan. They need to design a WBS to design, develop, test, market, and launch this new product line.

Using Generative AI Tool: Gemini

Google Gemini can provide a high-level WBS that the project manager and team can analyze to develop a tailored WBS that meets the project's specific needs, saving time and providing ideas you may wish to consider as you finalize scope planning. In addition, Gemini can provide an illustration to support your requirements documentation. To successfully leverage the power of Gemini, you need to input:

1. The scenario. Define the project concept using the Project Charter as a guide.
2. Determine project phasing. In this case study, we will use a design, develop, test, market, and launch phased approach.
3. Request the deliverable you require. In this scenario, your primary prompt should include the project overview and ask:

Prompt

Can you design a WBS that will support this project?

Copy Prompt 

4. Request an illustration of a happy dog using your new product. Your prompt can be as simple as:

Prompt

Can you create images of a happy small dog using a dog toy? Feel free to choose the dog type that suits you.

Copy Prompt 

Step-by-step tasks

Task 1: Download the [WBS Worksheet](#) document. This is a Microsoft Word Document.

Document download instructions

To download the document, keep the CTRL key pressed and click the document link.

Use the COMMAND key instead of CTRL on Mac systems.

Task 2: Share the concept and ask Gemini to design a WBS to support your project.

Task 3: Gemini can generate images. Develop a prompt to illustrate a happy dog using your products.

Task 4: Compare your findings with a friend or associate. Ask for their opinion on the validity of the generative AI analysis.

Task 5: Review the [WBS Potential Solution](#) document. How does your analysis compare?

Task 6: Compare the time required to access this information using generative AI tools to the time it would take to develop this document using piecemeal and manual methods.
