

Lab: Communication Templates, Document Review, Stakeholder Mapping, and Multilingual Collaboration with Generative AI

Estimated time: 30 minutes

Learning objectives

After completing this lab, you will be able to:

- Generate professional communication templates for different business scenarios
- Review and improve documents using AI-powered analysis
- Create stakeholder maps and translate content for multilingual teams

Introduction

This lab teaches you to use AI for professional communication and collaboration tasks. You will create reusable communication templates for common business scenarios, review and improve documents using AI analysis, map project stakeholders with their roles and influence levels, and translate content for multilingual collaboration. These skills help you communicate more effectively across teams and international boundaries.

Required tools

- Web AI tool (ChatGPT or Claude)
- Sample documents for review (optional)

Exercise 1: Generate communication templates and review documents

In this exercise, you will use AI to create professional communication templates for common business scenarios and review documents for clarity, tone, and effectiveness. Templates save time and ensure consistent messaging, while document review helps you identify areas for improvement before sharing with stakeholders.

Step 1: Generate communication templates

1. Use your AI tool to create a project status update email template
2. Prompt the AI to generate a template with sections for project overview, progress updates, milestones, risks/issues, and next steps
3. Next, create a change request notification template that includes sections for change description, business justification, impact analysis, and approval process

Hint

Example prompt for project status update:

"Create a professional email template for a weekly project status update. Include sections for project overview,

progress updates, milestones achieved, upcoming milestones, risks and issues, and next steps."

Sample project status update template:

Subject: [Project Name] - Weekly Status Update [Date]

Hi [Team/Stakeholders],

Here is the weekly status update for [Project Name].

Project Overview:

[Brief project description and current phase]

Progress This Week:

[Accomplishment 1]

[Accomplishment 2]

[Accomplishment 3]

Milestones:

Completed: [Milestone name and date]

Upcoming: [Milestone name and target date]

Risks/Issues:

[Risk/Issue description and mitigation plan, or "None at this time"]

Next Steps:

[Action item 1] - [Owner] - [Due date]

[Action item 2] - [Owner] - [Due date]

Please let me know if you have questions or concerns.

Best regards,
[Your Name]

Example prompt for change request:

"Create a formal change request notification template. Include sections for change description, business justification, impact analysis, timeline, approvals needed, and next steps."

Sample change request notification template:

Subject: Change Request: [Change ID] - [Brief Description]

Hi [Stakeholders],

A change request has been submitted for [Project Name] and requires your review.

Change Request ID: [CR-XXX]

Submitted By: [Name]

Date: [Date]

Change Description:

[Detailed description of the proposed change]

Business Justification:

[Why this change is needed and what business value it provides]

Impact Analysis:

Scope: [What areas/components are affected]

Schedule: [Impact on timeline]

Budget: [Cost implications]

Resources: [Team/resource implications]

Risk: [Potential risks of implementing/not implementing]

Proposed Timeline:

Review Period: [Start date] - [End date]

Implementation: [Proposed start date]

Approval Required From:

[Approver 1 name and role]

[Approver 2 name and role]

Next Steps:

Please review the change request and provide approval or feedback by [deadline date]. Reply to this email or update the status in [system/tool].

For questions or additional information, please contact [Name] at [contact info].

Thank you,
[Your Name]

Step 2: Review and improve documents using AI

1. Use this sample project proposal email to practice document review:
“Hi team, We need to implement a new customer portal ASAP. It should have login, dashboard, and reporting. Budget is tight, so we need to move fast. The CEO wants this done by next month. Let me know if you can help. Thanks!”
2. Prompt the AI to review this email for clarity, tone, structure, completeness, and professionalism.
3. Review the AI’s suggestions and note the improvements it recommends.

Hint

Example prompt:

"Review this document for: clarity (is the message clear and easy to understand?), tone (is it appropriate for [audience]?), structure (is information organized logically?), conciseness (can anything be shortened without losing meaning?), action items (are next steps clear?), and potential misunderstandings (could anything be interpreted incorrectly?). Provide specific suggestions for improvement with examples."

Exercise 2: Create a stakeholder map and enable multilingual collaboration

In this exercise, you will use AI to create a stakeholder mapping document that identifies key people, their roles, influence levels, and communication preferences. You will also translate content for multilingual teams, ensuring consistent messaging across different languages.

Step 1: Generate stakeholder map

1. Use this project scenario: You are implementing a new enterprise resource planning (ERP) system for a mid-sized manufacturing company. The system will replace legacy inventory, finance, and HR systems.

2. These are the known stakeholders:
CFO (approves budget, concerned about ROI)
IT Director (leads implementation, worried about timeline)
Finance Manager (daily user, needs accurate reporting)
HR Manager (needs employee data migration)
Warehouse Supervisors (use inventory module, resistant to change)
End Users - 50 employees across departments
3. Prompt the AI to create a comprehensive stakeholder map with categories, analysis, and engagement strategies for these stakeholders.

Hint

Example prompt:

"Create a stakeholder map for [project description]. For each stakeholder, include: Name/Role, Organization/Department, Interest Level (High/Medium/Low), Influence Level (High/Medium/Low), Communication Preference (email/meeting/report), Key Concerns, and Engagement Strategy. Organize stakeholders into categories: Decision Makers, Influencers, Implementers, and End Users. Suggest how frequently to communicate with each group."

Stakeholder categories: Power/Interest Grid:

High Power + High Interest (Manage Closely) | High Power + Low Interest (Keep Satisfied) | Low Power + High Interest (Keep Informed) | Low Power + Low Interest (Monitor).

Step 2: Translate content for multilingual teams

1. Use this project update to practice translation:
"The ERP implementation is on track for Phase 1 completion by March 31st. The Finance module is 80% complete, with user acceptance testing scheduled for next week. We identified a data migration issue that requires additional validation steps. The project team will conduct training sessions for all users starting April 5th. Please review the training schedule and confirm your attendance."
2. Translate this content into Spanish and Mandarin Chinese to communicate with international team members.
3. Prompt the AI to translate the content while maintaining professional tone, technical accuracy, and cultural appropriateness.

Hint

Example prompt:

"Translate this content into [target language]. Maintain: professional business tone, technical terminology accuracy (provide glossary if needed), cultural appropriateness, formatting, and structure. Highlight any terms that don't translate directly and suggest context-appropriate alternatives. Flag any cultural considerations that might affect how the message is received."

Translation best practices:

Provide context (who is the audience, what is the purpose) | Specify formality level | Include technical glossary for specialized terms | Review for cultural nuances | Consider localization (dates, units, currency) beyond literal translation.

Step 3: Create a multilingual project glossary

1. Use these key project terms for the ERP implementation:
ERP (Enterprise Resource Planning)
UAT (User Acceptance Testing)
Data Migration

Stakeholder
Change Management
Go-Live

2. Prompt the AI to create a multilingual glossary for these terms in English, Spanish, and Mandarin Chinese.
3. Ensure the glossary includes definitions, translations, and usage examples for each term.

Hint

Example prompt:

"Create a project glossary with these terms: [list terms]. For each term, provide: English definition, translation in [languages], context/usage notes, and example sentence. Format as a table with columns: Term | Definition | [Language 1] | [Language 2] | Usage Notes. Ensure that technical terms maintain consistent meaning across languages."

Summary

In this lab, you used AI to create professional communication templates, review and improve documents, map project stakeholders, and enable multilingual collaboration through translation and glossaries. These skills help you communicate effectively in diverse, international project environments and maintain consistent messaging across teams and languages.
