

Lab: Creating AI Portraits

Estimated time: 20 minutes

Welcome to hands-on lab, Creating AI Portraits.

Learning objectives

After completing this lab, you will be able to:

- Generate AI portraits using the Raphael AI Image Generator with descriptive prompts.
- Explore different aspect ratios to create unique portrait variations.
- Refine portraits by experimenting with prompts, style choices, and additional attributes.

Disclaimer

The following lab uses a third-party AI tool called Raphael AI. Raphael AI is an open-source, free online tool that allows learners to generate unlimited AI portraits without login or registration. It is referenced here solely for educational purposes to highlight the potential and responsible use of AI in creative tasks. You are encouraged to use the tool responsibly, keeping in mind ethical considerations in AI-generated content.

Introduction

Generative AI models employ advanced deep learning algorithms to create realistic portraits that closely resemble those of actual individuals. The resulting AI-generated portraits span a spectrum from conventional styles to abstract or surreal interpretations, highlighting the artistic versatility of the model.

This intricate process involves training the model on an extensive dataset of pre-existing portraits, allowing it to grasp patterns, styles, and features. Consequently, the model can adeptly apply this learning to generate entirely fresh and imaginative portraits.

By creating distinctive visual representations, AI portraits exhibit the convergence of technology and art, presenting innovative approaches to produce captivating and hyper-realistic visual depictions of individuals.

In this lab, you will gain hands-on experience with Raphael AI to generate high-quality portraits. You will experiment with text prompts, art styles, and aspect ratios to see how AI transforms descriptions into unique images.

Exercise 1: Generating AI Portraits using text prompts and predefined styles

In this exercise, you will create portraits by entering simple keywords and letting Raphael AI generate prompts and images for you to generate the desired output.

Step 1: Log in to Raphael AI Image Generator

1. Click [Raphael AI](https://raphaelai.org/) to launch the Raphael AI Face Generator platform. You do not need to sign up or log in. The tool is free to use and allows unlimited generations.

If you cannot access the platform through the link, you can copy the following URL and paste it in a browser.

<https://raphaelai.org/>

Step 2: Generate an prompt from keywords

1. If you do not know how to write a relevant prompt, click the **Prompts** tab. This will open up a dialogue box where you can enter keywords related to the image you have in mind.

2. Enter a few keywords regarding the image or portrait you want to generate. Let's enter Harry potter. Click **Search**.

3. The tool will generate multiple descriptive prompts with a sample image related to the searched keyword. In the following image, you can see the prompts produced by the tool based on the keywords provided in the previous step.

4. Copy the generated **prompt** and select **Image Generator** option to go back to the **Image Generator** tool to create the image.

5. Paste the copied prompt under **What will you create** section and select the desired **Aspect Ratio**. Click **Generate**.

6. The following image shows the image generated based on prompt produced in the previous step.

Exercise 2: Generating AI portraits by providing prompts and attributes in details

In this exercise, you will experiment with creating a portrait based on the prompt provided by you with specific details and attributes to generate the desired output.

Step 1: Generate an image using the provided prompt

1. In the description text box under **What will you create** section, type a phrase describing the portrait you want to create .

Swiss man, late 30s, blond hair, blue eyes, SWISS Alps backdrop, extreme close-up shot

2. Choose an **aspect ratio** for your portrait and click **Generate**.

3. You will have image (portrait) displayed based on the given prompt.

Try yourself!

Raphael AI provides multiple customization options that let you fine-tune your portraits beyond the initial prompt. You can adjust:

- **Art Style:** Choose prompts between photorealistic, cinematic, fantasy, anime, or abstract styles.

- **Detail Controls:** Experiment prompt with camera perspectives (close-up, wide shot), color tones (warm, pastel, monochrome), or special effects (cinematic lighting, soft blur).
- **Aspect Ratio:** Switch between square, portrait, or widescreen formats depending on your creative intent.

Summary

Congratulations! You have completed the lab: Creating AI Portraits.

In this lab, you learned how to:

- Use text prompts and keywords to generate AI portraits.
- Apply different aspect ratios to create potrait variations.
- Customize outputs by refining prompts and experimenting with attributes.

This lab provided an opportunity to understand the creative potential of AI in visual arts while reinforcing the importance of responsible and ethical AI usage.
