

Hands-on Lab: Generative AI for Research and Document Summarization

Estimated duration: 30 minutes

Introduction

A project charter is a critical preliminary document created to determine the feasibility of a project. In this lab, you will have an opportunity to use generative AI to research a potential project scenario and develop a preliminary project charter, create a list of key stakeholders and project risks, and develop a milestone chart. You will then have an opportunity to use generative AI to summarize the project charter. You will use Copilot and NotebookLM in this lab.

Scenario

You are a project manager working for a chain of seven coffee shops in a large metropolitan area. You have been assigned a project to develop a business app to support the chain. You need to develop a project charter, identify stakeholder roles and responsibilities, provide a list of potential risks and responses, and present management with a milestone chart. You want to use generative AI to provide recommendations for these documents. You will then summarize these documents into an easy-to-share format to enhance stakeholder understanding and readability.

Objectives

- Review the demo video: Generative AI for Research
- Review the demo video: Using Generative AI to Summarize Documents

Prerequisites

- Access to Copilot, NotebookLM, PDF creation capability, and Microsoft Word or equivalent.
- See Appendix A for instructions to access Copilot through Bing.

Appendix A: Accessing Copilot

Accessing Microsoft Copilot through Bing is straightforward. Here's a step-by-step guide to help you get started:

1. Open the Bing homepage:
 - Navigate to the Bing homepage by entering www.bing.com in your web browser.
2. Click on the Chat link:
 - On the Bing homepage, you will find a Chat link in the upper menu. Click on this link to start your session with Copilot.
3. Choose a conversation style:
 - Before you begin chatting, you will have the option to choose a conversation style that suits your preference, such as creative, precise, or balanced.
4. Engage with Copilot:
 - You can now start interacting with Copilot. Type in your queries, and the AI will assist you with information, content generation, and more.

Additionally, Copilot is integrated into the Microsoft Edge web browser. You can access it by clicking the Bing sidebar button in the upper right corner of the Edge browser. For mobile devices and other web browsers, Copilot can be added through add-ons and downloadable apps. This allows you to take the power of AI with you on the go. Remember, Copilot is designed to understand complex and natural language queries, so feel free to ask questions or request assistance as you would naturally.

Step-By-Step Lab Tasks

Task 1: Access Copilot. Develop a prompt sharing the project scenario requesting Copilot to provide a project charter, a list of key stakeholders by role and responsibilities, potential project risks, and a milestone chart. A suggested prompt is shared below.

Task 2: Copy and paste the Copilot outputs into a Microsoft Word document or equivalent. Then, convert the document into PDF format.

Task 3: Access NotebookLM and upload the PDF document to attain a summary of the project.

Task 4: Compare your findings with a friend or associate and seek their opinion on the validity of your analysis.

Task 5: Review the [Generative AI for Research and Document Summarization Potential Solution](#). How does your analysis compare?

To download the document, keep the CTRL key pressed and click the document link.

Use the COMMAND key instead of CTRL on Mac systems.

Suggested Copilot Prompt

Prompt

I am a project manager working for a chain of seven coffee shops in a large metropolitan area. I have been assigned a project to develop a business app to support the chain. Please create an initial project charter for this project. Then provide the following attachments with the project charter:

- List of key stakeholders with roles and responsibilities assigned
- List of potential project risks with proposed responses
- Milestone chart to support the proposed project schedule
