

Lab: Perform a Product SWOT

Estimated duration: 30 minutes

In this lab, you will perform an internal and external assessment of a product of your choice and then record your findings in a SWOT template.

Learning objectives:

At the end of this lab, you will be able to:

- Perform an internal and external assessment of a product of your choice.
- Document your findings on a SWOT Template.

Prerequisites:

1. You must have Microsoft Excel installed on your computer or a Microsoft Office 365 account online.
2. Ensure you reviewed the following reading and videos:
 - Reading: Strengths, Weaknesses, Opportunities, and Threats (SWOT)
 - Video: Performing the Product Concept External Assessment
 - Video: Performing the Product Concept Internal Assessment

Exercise

1. Keeping the CTRL key pressed, click [here](#) to download the **SWOT Analysis** MS Excel document.

Note: Use the COMMAND key instead of CTRL on Mac systems.

2. Identify a product. This can be a product you help develop as part of your job. It can be an existing product you use every day.

3. Perform an external assessment. What are the opportunities that the product offers, and what are the potential threats to the product's market share? Document your findings in the opportunities and threats section of the SWOT template.

Tip: Tap into your experiences and solicit input from others who use or are familiar with the product.

4. Next perform an internal assessment. What strengths and weaknesses do you perceive the firm that produces the product or service face? Document your findings in the strengths and weaknesses section of the SWOT template.

Tip: You may want to search the internet to determine the company's current state. Ask others who may be familiar with the company. Or document what you know or believe to be correct.

5. Save your SWOT analysis with a distinct name you can remember. This analysis can become part of an overall personal portfolio of tools, techniques, and skills you have learned to apply. This example can be beneficial to share with peers, reference for real-world opportunities to use the tool, or share with current and prospective employers to highlight your skills and competencies.
