

Hands-on Lab: Analyzing Opportunities and Challenges in AI

Estimated duration: 30 minutes

Introduction

You have reviewed the challenges and opportunities impacting the AI product manager and the key reasons AI product development projects often fail. You also identified the "AI Dream Team" in a prior video. In this lab, you will step into the role of an AI product manager and evaluate an AI product development scenario to develop an improved "Checkout-free grocery shopping AI system."

Objectives:

In this lab, you will:

- Analyze and define opportunities presented by the product concept
- Analyze and describe potential product management challenges you may encounter
- Define key roles that need to be part of the product development team
- Validate your finding using Microsoft Copilot

Prerequisites:

Ensure that you have completed the following videos:

- Video: [Building the AI "Dream Team"](#)
- Video: [Challenges and Opportunities for AI Product Managers](#)
- Video: [Why AI Product Development Projects Fail](#)

You must have access to Microsoft Word, either through the desktop or online version. If you want to sign up for Microsoft Office 365 and need help, view the [Sign up for Microsoft 365 lab](#).

Task 1: Review the following AI product concept scenario

Your firm wants to develop an AI-powered, checkout-free, grocery shopping system. Currently, such systems are already in use. Your firm believes it can meet and exceed the functionality provided by current systems while eliminating several system shortfalls.

The firm wants the system to function in the following way:

- Develop an application that customers can download free of charge
- Authenticate customers by credit card approval when they enter the store and begin shopping.
- Monitor customers, items, and carts with sensors throughout the store.
- Capture purchases (items and quantities) and add them to the customer's cart with the sensors. Sensors also delete items that are removed from the cart.
- Update the cost of items added to the cart by the customer in real time through app updates.
- Collect payment automatically when the customer leaves the store. Receipts are offered electronically or in printed-out form.
- Scale the system to accommodate large numbers of shoppers even during peak hours.

Task 2: Download the Scenario Evaluation Worksheet

Keeping the CTRL key pressed, click to download the [Scenario Evaluation Worksheet](#) that provides tables to complete this assignment.

Note: Use the COMMAND key instead of CTRL on Mac systems.

Task 3: Analyze and document opportunities

- Identify at least five opportunities presented in the scenario.
- Opportunities may be linked to customers and/or the firm using the product.

Task 4: Analyze and document challenges

- Identify and list at least five challenges presented in the scenario.
- Challenges can be categorized as financial, technical, customer-focused, resource-driven, and function and feature limitations.

Task 5: Identify the AI product management team

- Define at least four roles to plan and develop this proposed AI product.
- List the basic responsibilities associated with each role.
- Don't forget to include the AI product manager!

Task 6: Hands-on practice with Microsoft Copilot

- Use Microsoft Copilot to validate your analysis from Tasks 3, 4, and 5.
- Input each of the following prompts into Microsoft Copilot separately:
 - **Prompt 1:** Identify at least five opportunities presented by this product concept scenario.
 - **Prompt 2:** Identify and list at least five challenges presented by this product concept scenario.
 - **Prompt 3:** Define at least four roles required to plan and develop this proposed AI product. List the basic responsibilities associated with each role. Include the AI product manager.

Task 7: Review the solution

Keeping the CTRL key pressed, click to download the [Potential Solutions](#) document.

Note: Use the COMMAND key instead of CTRL on Mac systems.

- Compare your analysis to the recommended solution.
- Update your analysis as required.

Note: You may identify opportunities or challenges not listed in the solution. That is a plus.

Task 8: Compare and reflect

Update this section as per the raw input, combining comparison and reflection:

- Compare your initial analysis with the responses provided by Microsoft Copilot.
- Note that Copilot's output may differ from yours. Review and use Copilot's feedback to validate and update your original analysis.
- Reflect on any differences and similarities between your analysis and Copilot's. Consider what you learned and how you might improve your initial analysis.

Task 9: Save your final analysis

- Save your final analysis as a Word or PDF file for future reference.
