

Hands-on Lab: Perform Skills Analysis

Estimated duration: 30 minutes

Introduction

We shared a comprehensive spreadsheet that listed general and AI-specific product management skills and competency requirements. In this lab, you will have an opportunity to perform a self-skills assessment. Which of your product management skills are adequate? Which skills can be improved? Finally, what is your action plan if a skill is an improvement candidate?

Objectives

In this lab, you will:

- Modify the spreadsheet "AI Product Managers Skill Checklist"
- Review your personal skill levels
- Document which of your personal skills are adequate or can be improved
- Develop an action plan for the top 5 most critical personal skills you want to improve

Prerequisites

- Ensure you've completed all the readings and videos in this lesson.
- You must have access to Microsoft Word, either through the desktop or online version. If you want to sign up for Microsoft Office 365 and need help, view the [Sign up for Microsoft 365 lab](#).

Part I: Download the Product Manager Skills Checklist

Keeping the CTRL key pressed, click to download the [Product Manager Skills Checklist](#).

Note: Use the COMMAND key instead of CTRL on Mac systems.

This checklist provides a list of skills, competencies, techniques, or required areas of expertise a Product Manager and AI Product Manager should optimally possess and use to their advantage. The spreadsheet lists the skill, defines it, and provides columns titled "Adequate," "Can Be Improved," and "Action Plan."

Part II: Document which skills are adequate, and which can be improved

Task 1: Check which skills on the MS Excel skills checklist are adequate.

Task 2: Check which skills on the MS Excel skills checklist can be improved.

Part III: Develop an action plan

Task 1: Mark the "Action Plan" column in the MS Excel skills checklist.

Task 2: Strive to identify the top 5 skills you feel are important to develop and create an action plan.

Once you achieve an adequate level in these initial skills, return to the checklist and create a game plan to improve five additional skills in the future.
