

Hands-on Lab: Generate Ideas using Generative AI

Estimated duration: 30 minutes

Introduction

A primary product manager role is to act as the voice of the customer (VOC) and develop innovative product concepts that address market problems and align with the firm's strategic goals. According to studies by the "Product Center of Excellence", approximately 50% of new ideas are rejected within organizations because they are not viable. An additional 20% of new ideas are rejected internally because organizations are unable to build them. Even worse, fewer than 5% of all new products achieve success after launch.

The initial product concept document generated during the Conceive phase of the product management lifecycle is critical to a product's success potential. Generative AI can enhance the quality, relevance, and effectiveness of product concepts and requirements, ultimately leading to the development of more innovative and successful products.

Objectives

- Review the scenario for Green Hound Toys Inc. and summarize the product concept document entries
- Apply Google Gemini through creative prompts to develop a product concept document

Prerequisites

- Access to Microsoft Word, Google Docs, or equivalent.
- Navigate to <https://gemini.google.com/> to access **Google Gemini**
- **Gemini** has a basic service that is available at no cost. You will be required to accept the terms of use before you can access the **Gemini** tool.

Scenario

Green Hound Toys Inc. is a company that understands pet owner's increasing desire for eco-friendly and durable toys. They plan to create an innovative line of eco-friendly dog toys and are developing the initial product concept documents. They have access to limited data. They need the help of a generative AI tool to analyze potential ideas and ensure they address all key areas.

The Product Concept Document Entries

- Market problem or opportunity
- Market segments
- Financial considerations
- Competitive landscape
- Main features and functionality
- Key differentiators

Tasks

Document download instructions

To download the document, keep the CTRL key pressed and click the document link.

Use the COMMAND key instead of CTRL on Mac systems.

Task 1: Download the [Product Concept Worksheet](#) document. This is a Microsoft Word document where you can document the product concept details.

Task 2: Develop a series of prompts to access ideas from Gemini to develop your Product Concept Document. You may wish to use a single initial prompt or a series of continuous prompts.

Task 3: Gemini provides the capability to generate images. Develop a prompt to provide an illustration of a happy dog using your products.

Task 4: Compare your findings with a friend, peer, or associate. Ask their opinion on the validity of the generative AI analysis.

Task 5: Review the [Product Concept Potential Solution](#) PDF document. How does your analysis compare? Compare the time required to access this information using generative AI tools, such as Gemini, to the time it will take to develop this document using piecemeal and manual methods.
